

Sumac Ave Study

Broadway to 19th   

The Sumac Avenue Transportation Infrastructure Study will explore a variety of street designs to address the corridor needs and will include an engagement process to involve the community in understanding the range of options, assessment and recommendation of a street design. The intention of the study and future project is to improve connectivity and mobility for all using the corridor, including students, parents, teachers and staff traveling to Crest View Elementary. The study will assess multimodal improvements, review storm drainage needs and upgrades and gather community input.

Existing Conditions

Poor Drainage

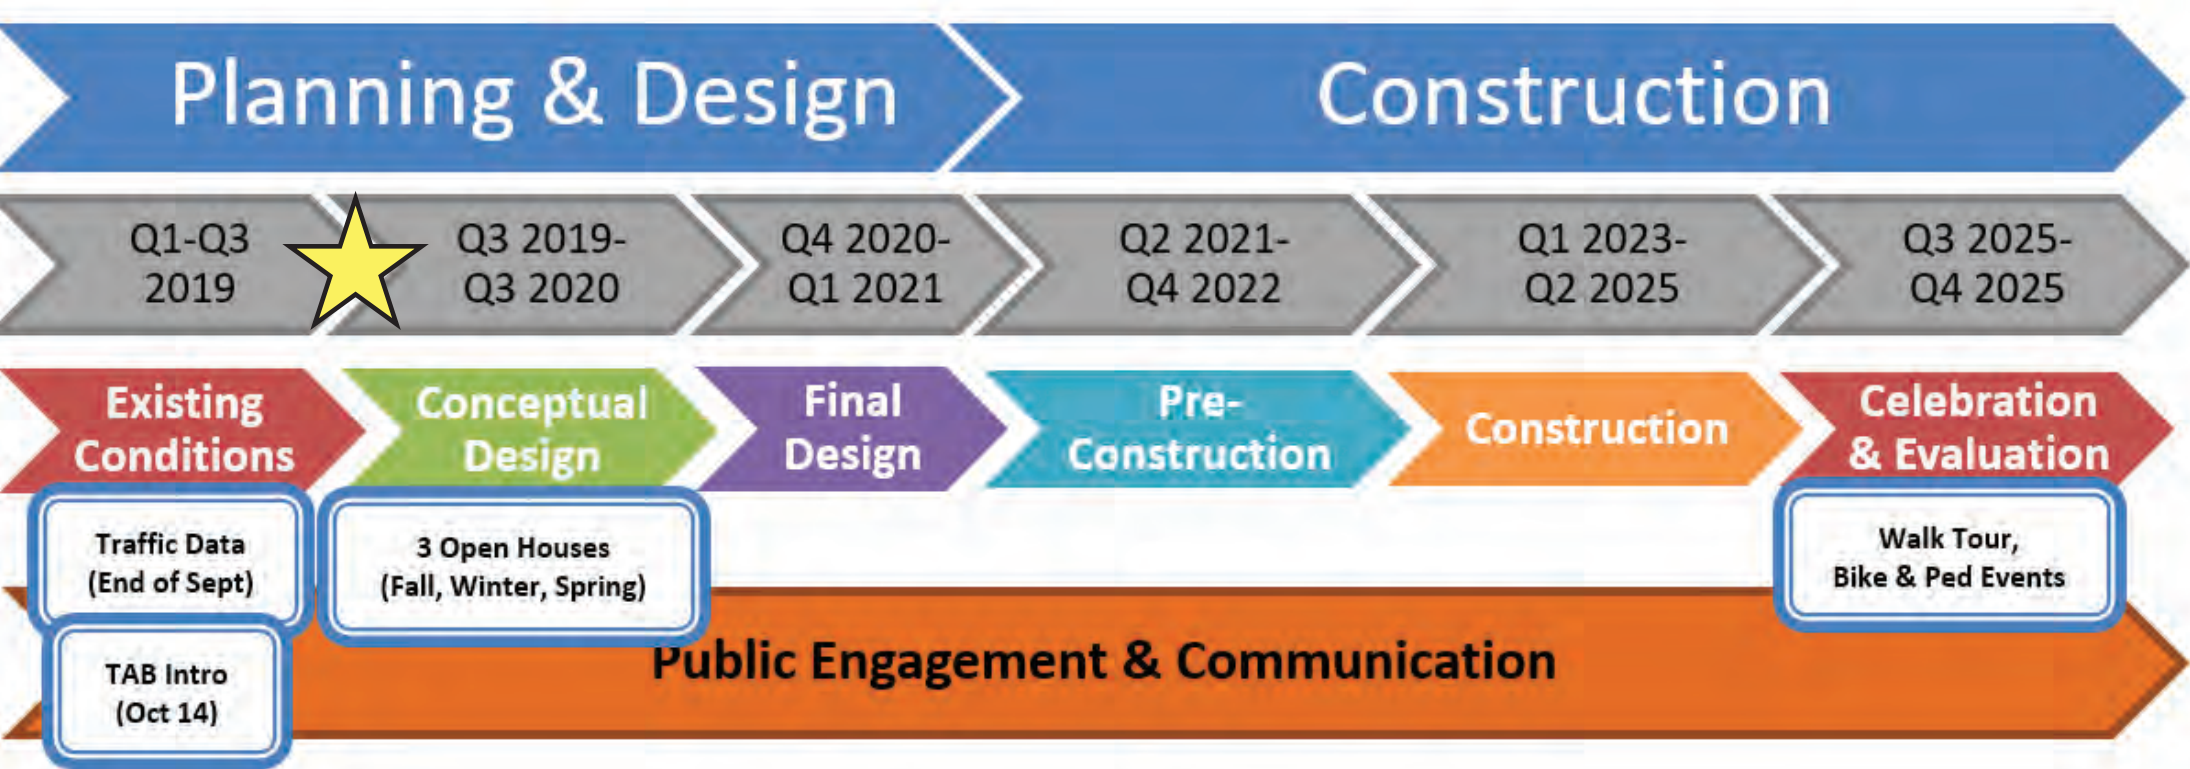

Discontinuous Sidewalks

Deteriorating Pavement
