

Five Barriers to Transportation Accessibility in Boulder

Through in-person and online feedback, Boulder community members identified five main barriers to transportation accessibility

Weather

Winter weather is an isolating condition that limits access to bus stops, recreation centers and other key destinations

Transit

Narrow sidewalks present challenges to reaching bus stops and increased access to senior centers and services is needed

Safety

Sharing space with faster modes of transportation like cars and bikes feels unsafe

Crosswalks

Concerns include pedestrian crossing time, lack of crosswalk striping and driver inattentiveness

Sidewalks

Narrow or uneven surfaces, driveway curb cuts and sidewalk blockages all present challenges

The ADA Self-Evaluation and Transition Plan will chart a course for improving transportation accessibility in these and other areas. Learn more at boulder.colorado.gov/transportation/ada
